

Math 1314 Lesson 11

1) Evaluate the function $f(x) = 2x^2 + 3x + 4$ at the given value.

- a) $f(2) = \underline{\hspace{1cm} ? \hspace{1cm}}$
- b) $f(-2) = \underline{\hspace{1cm} ? \hspace{1cm}}$
- c) $f(2.5) = \underline{\hspace{1cm} ? \hspace{1cm}}$
- d) $f(-5.1) = \underline{\hspace{1cm} ? \hspace{1cm}}$

2) Evaluate the function $f(x) = \sqrt{3x + 4}$ at the given value.

- a) $f(0) = \underline{\hspace{1cm} ? \hspace{1cm}}$
- b) $f(-1) = \underline{\hspace{1cm} ? \hspace{1cm}}$
- c) $f(2.1) = \underline{\hspace{1cm} ? \hspace{1cm}}$
- d) $f(5.4) = \underline{\hspace{1cm} ? \hspace{1cm}}$

3) Use the graph to find each function value.

a) $f(-3) = \underline{\hspace{1cm}} ?$

b) $f(-1) = \underline{\hspace{1cm}} ?$

c) When $x = 0$, $y = \underline{\hspace{1cm}} ?$

d) Domain of function: $\underline{\hspace{1cm}} ?$

e) Range of function: $\underline{\hspace{1cm}} ?$

f) When $y = 5$, $x = \underline{\hspace{1cm}}$ and $\underline{\hspace{1cm}}$

4) Use the graph to find each function value.

a) $f(0) = \underline{\hspace{1cm}} ?$

b) $f(1) = \underline{\hspace{1cm}} ?$

c) $f(4) = \underline{\hspace{1cm}} ?$

d) When $x = 0$, $y = \underline{\hspace{1cm}} ?$

e) Domain of function: $\underline{\hspace{1cm}} ?$

f) Range of function: $\underline{\hspace{1cm}} ?$

g) When $y = 9$, $x = \underline{\hspace{1cm}}$
