

Lesson 20: Present Value

Criteria	Exemplary (4)	Proficient (3)	Developing (2)	Beginning (1)
Identification of Variables	Correctly identifies all variables (FV, r, n, m) and adjusts for frequency compounding (e.g., compounding monthly).	Identifies most variables correctly but makes minor errors in adjusting r or n for compounding frequency.	Identifies some variables but misses the need for compounding adjustments (r/m or $n \times m$).	Incorrectly identifies variables or misses key information (e.g., confuses PV and FV).
Formula Selection & Setup	Selects and sets up the correct PV formula, including appropriate adjustments for annuities or deferred payments.	Selects the correct formula but makes a minor error in substitution.	Uses an incorrect formula (e.g., simple interest instead of compound) or misinterprets the cash flow type.	Incorrect formula or no clear formula used.
Mathematical Execution	Executes calculation with 100% accuracy, using proper order of operations (PEMDAS/BODMAS).	Calculation is mostly correct, with minor arithmetic errors that do not reflect poor understanding.	Significant calculation errors or inability to use a financial calculator/spreadsheet properly.	Calculation is incorrect or omitted.
