

Lesson 25: Linear Programming and Simplex Method

Assessment Criteria for Systems of Linear Inequalities

- **Boundary Line Graphing (25%):** Accurate plotting of $y = mx + b$ for all inequalities.
- **Line Type (25%):** Correct usage of solid lines ($\leq, \geq$) for included boundaries and dashed lines ($<, >$) for excluded boundaries.
- **Shading/Feasible Region(25%):** Correct shading above ($>$) or below ($<$) lines, and identification of the final intersection area where all inequalities hold true.
- **Vertex Identification:(25%):** Correct calculation of vertices (intersection points) that define the vertices of the bounded region.
