

Lesson 1: Solving Quadratic Equations

Criteria	4 - Distinguished (Exceeds)	3 - Proficient (Meets)	2 - Apprentice (Developing)	1 - Novice (Beginning)
The Quadratic Formula	Accurately sets up, substitutes, simplifies, and reduces the formula, handling radicals and .	Correctly substitutes and solves, with minor simplification errors.	Incorrectly substitutes a, b, c values or misapplies $\pm$.	Cannot set up or use the formula.
Solving by Factoring	Accurately factors trinomials (even when a $\neq 1$) and applies Zero Product Property.	Factors simple trinomials (a = 1) correctly; struggles with a $\neq 1$.	Attempts factoring but makes errors in factoring or identifying roots.	Cannot factor the quadratic expression.
