

Lesson 3: Graphs and Functions

Criteria	Proficient (Exemplary)	Developing (Proficient)	Emerging (Basic)	Novice (Below Expectations)
Accuracy of Plotting	All points plotted precisely; correct curve/line shape, including key features (e.g., asymptotes, vertex).	Most points plotted correctly; general trend is correct with minor errors in plotting.	Several points are misplaced; trend is partially visible.	Data is not plotted correctly; graph is fundamentally inaccurate.
Graph Mechanics	Axis labeled, proper units included, consistent and appropriate scale, clear key, descriptive title.	Labels and units included, but scale is slightly inconsistent or hard to read.	Missing labels, units, or key. Scale is inaccurate.	Unlabeled, unscaled, or unrecognizable graph.
Function Features	Correctly identifies/labels intercepts, vertices, and key behaviors (domain/range/asymptotes).	Identifies most features, but labels are imprecise or one significant feature is missing.	Identifies major features incorrectly.	Fails to identify function characteristics.
Transformation/Graph	Correctly graphs parent function and accurately transforms it.	Graphs parent function and transforms it, but with minor errors in location.	Attempts transformation but fails to move the function correctly.	Graph does not show understanding of transformation.

Interpretation

Clearly explains the relationship between the equation and its graph; accurately predicts trends.

Explains relationship with some minor misconceptions.

Vague interpretation; struggles to connect graph to equation.

Cannot interpret the graph.
