

Lesson 5: Linear Functions

Criteria	4 - Exemplary	3 - Proficient	2 - Developing	1 - Emerging
Representation & Forms ($y = mx + b$)	Correctly models situations using slope-intercept, point-slope, and standard forms. Efficiently converts between them.	Models situations using appropriate forms. Converts between forms with minor errors.	Uses one form consistently but struggles with others. Conversion errors are frequent.	Cannot identify or write the appropriate linear form from given info.
Graphing Linear Functions 	Accurately graphs lines. Labels axes, scale, intercepts, and slope triangle clearly.	Graphs lines correctly. Minor errors in labeling or scaling.	Graphs lines with inaccuracies in slope or y-intercept.	Graphs are incorrect or unrecognizable.
Slope & Intercepts 	Interprets slope as a rate of change and y-intercept in context. Explains meaning fluently.	Identifies slope and intercept. Relates them to context mostly correctly.	Calculates slope/intercept correctly but cannot explain their meaning.	Struggles to calculate slope or intercept.
