

Lesson 6: Integration by Using Table of Integration

Assessment Criteria Rubric (Table Integration)

Criteria	Exceptional (4)	Effective (3)	Developing (2)	Emerging (1)
Identification	Identifies the exact or equivalent formula in the table immediately.	Identifies the correct formula after minor trial.	Misinterprets the form; chooses a similar but incorrect formula.	Cannot identify relevant formula.
Substitution	Correctly identifies u and du, handles chain rule factors perfectly.	Identifies u and du but makes minor errors in constant factors.	Attempts substitution but incorrectly identifies u or du.	Fails to use u-substitution when necessary.
Manipulation	Expertly rearranges/simplifies the integral (completing square, split fractions).	Performs necessary algebraic steps with one minor error.	Rearrangement is present but inefficient or partially incorrect.	Cannot rearrange into a table-friendly form.

Execution	Applies formula correctly, replacing u back to original variable accurately.	Applies formula but makes a minor sign or algebraic error.	Misapplies the formula structure.	Cannot apply the table formula.
-----------	--	--	-----------------------------------	---------------------------------

Final Answer	Correct final answer including constant (+C) or correct evaluation of bounds.	Final answer is mostly correct but lacks +C or has small evaluation error.	Significant errors in evaluation or back-substitution.	Incorrect answer.
