

Math 1314 Lesson 04

1) Solve the equation $(x - 3)^2 = 16$

a) $\sqrt{(x - 3)^2} = \underline{\hspace{1cm}}?$

b) $x - 3 = \pm \underline{\hspace{1cm}}?$

c) Solving part (b) for x : $x = \underline{\hspace{1cm}}?$ and $x = \underline{\hspace{1cm}}?$.

2) Solve the equation $(5x - 3)^2 = 36$

a) $\sqrt{(5x - 3)^2} = \underline{\hspace{1cm}}?$

b) $5x - 3 = \pm \underline{\hspace{1cm}}?$

c) Solving part (b) for x : $x = \underline{\hspace{1cm}}?$ and $x = \underline{\hspace{1cm}}?$.

3) Solve the equation $4(3x - 7)^2 = 24$

a) Divide both sides by 4 first. $(3x - 7)^2 = \underline{\hspace{1cm}}?$

b) $3x - 7 = \pm \underline{\hspace{1cm}}?$

c) Solving part (b) for x : $x = \underline{\hspace{1cm}}?$ and $x = \underline{\hspace{1cm}}?$.

4) Solve the equation $(7x - 3)^2 = -36$

a) $\sqrt{-36} = \underline{\hspace{1cm}}?$ (in terms of i)

b) $7x - 3 = \pm \underline{\hspace{1cm}}?$

c) Solving part (b) for x : $x = \underline{\hspace{1cm}}?$ and $x = \underline{\hspace{1cm}}?$.

5) Solve the equation $4(5x - 1)^2 = -44$

a) Divide both sides of equation by. $(5x - 1)^2 = \underline{\hspace{1cm}}?$

b) $5x - 1 = \pm \underline{\hspace{1cm}}?$

c) Solving part (b) for x : $x = \underline{\hspace{1cm}}?$ and $x = \underline{\hspace{1cm}}?$.
