

Lesson 14: *p*-series Test

Assessment Rubric for P-Series Test

Criteria	Proficient (Full Points)	Developing (Partial Points)	Not Met (No Points)
Identification	Accurately identifies the series as a $\frac{1}{n^p}$ p-series or notes it is a constant multiple of a p-series.	Identifies it as a p-series but struggles with complex radicals or coefficients (e.g., $\frac{1}{\sqrt{n^3}}$).	Fails to identify the series type or misapplies it to a non-series (e.g., geometric).
Parameter Determination (p)	Corrects algebra to find the exponent	Makes a minor algebra error in calculating p.	Incorrectly identifies p (e.g., using the base instead of the exponent).
Convergence/ Divergence Decision	Correctly concludes convergence if $p > 1$ and divergence if $p \leq 1$.	Misinterprets the inequality ($p < 1$ for convergence).	Incorrect conclusion despite finding the correct p..
Justification	Explicitly states "p-series test" and compares the value of p to 1.	Identifies p but fails to explicitly reference the p-series test rule.	Provides no justification or incorrect reasoning.
