

Equations of Lines

$$m = \text{slope} = \frac{y_2 - y_1}{x_2 - x_1}$$

$$\text{Equation of line: } y = mx + b; \quad y - y_1 = m(x - x_1)$$

1) Find the slope (m) of the line passing through the points $(2, 3)$ and $(-2, 5)$.

2) Find the slope (m) of the line passing through the points $(-1, -4)$ and $(0, 0)$.

3) Draw the graph of the line $x - 5y = 3$.

Find the slope (m) and the y -intercept of the line.

4) Draw the graph of the line $2x - 3y = 6$.

Find the slope (m) and the y -intercept of the line.

5) Find an equation of the line that passes through the point $(2,3)$ and has slope of -3 .

Draw the graph of the line.

- 6) Find an equation of the line that passes through the point $(-1, 4)$ and has slope of $\frac{2}{3}$.

Draw the graph of the line.

7) Find an equation of the line that passes through the points $(-1, 4)$ and $(2, 3)$.

Draw the graph of the line.

8) Find an equation of the line that passes through the points $(-2, -5)$ and $(1, 4)$.

Draw the graph of the line.
